🎓 EDUCATION

University of Michigan, Ann Arbor, MI Aug. 2015 – Dec. 2016

Master's degree in Quantitative Finance & Risk Management GPA: 3.8/4.0

- Relevant Courses: Stochastic Calculus, Continuous-Time Finance, Machine Learning, Fixed Income, Statistical Methods in Finance, Computational Finance, Linear Models

Zhejiang University, Hangzhou, China Sept. 2011 – Jun. 2015

Bachelor's degree in Economics Major GPA: 3.75/4.0

- Relevant Courses: Econometrics, PDEs, Data Structure and Algorithms, Object-Oriented Programming
- Awards: Merit-based Scholarship (Top 8% academic records)

👤 PROFESSIONAL EXPERIENCE

State Street Corporation Jun. 2016 – Aug. 2016

Business Analyst Intern Hangzhou, China

- Provided finance research to support a group operating a fund investment app for Chinese retail investors
- Composed research paper about robo-advisors, explored business models of leading companies
- Implemented Black-Litterman model to determine the optimal weights over various types of assets for clients with different risk-return preferences and investment goals, back-tested performances of time-based and threshold-based rebalancing strategies, and optimized corresponding parameters

Yuntu Houpu Investment Management Co., Ltd. Oct. 2015 – Dec. 2015

Part-time Risk Analyst Shenzhen, China

- Performed risk control for a private fund of Chinese A-shares with AUM \$1 million in a five-man team
- Aggregated daily raw P&L data in Python, calculated portfolio VaR and automatically produced risk reports
- Participated in the formulation of daily trading plans, built Excel-VBA tools connecting to Choice Financial Terminal to automatic notifications about timing of putting buy/sell orders for traders

⚙️ PROJECT EXPERIENCE

Portfolio Simulation for Risk Management in C++ Oct. 2016 – Nov. 2016

- Implemented a fast Monte-Carlo simulation approach to forecast distribution of portfolio PnL
- Collaborated with 3 classmates to determine the C++ data model, enhanced the readability and reusability of our code by object-oriented programming, and managed team collaborations via Github
- Improved simulation efficiency by Benson-Zangari algorithm from RiskMetrics documents

Pairs Trading Strategy Based on Cointegration Mar. 2016 – Apr. 2016

- Collected data for 14 telecom stocks' prices, created visualizations of correlations over time periods
- Chose AT&T and Verizon as a pair, applied cointegration test to determine the optimal hedging ratios
- Back-testing of the strategy yielded annual return of 22.4%, max drawdown of 2.90%, and 1.8 Sharpe Ratio

Mircostructure Study on China's Stock-Index Futures Mar. 2015 – Jun. 2015

- Collected high-frequency data of four parallel CSI 300 future contracts of 90 trading days
- Applied VPIN model to analyze the market maker's behavior, conducted maximum likelihood estimation of model parameters using information in the order book, and computed the probabilities of informed trading
- Built simultaneous equation model to estimate the impact of informed trading on volumes and volatilities

📌 OTHERS

- Programming & Software Skills: C++, Python, R, Matlab, SQL, L^AT_EX, Stata
- Hobbies: Texas Hold'em, Basketball, Swimming
